

1.

(a). Valid

Smoke	Smoke	Smoke \Rightarrow Smoke
T	T	T
F	F	T

(b) Neither

Smoke	Fire	Smoke \Rightarrow Fire
T	T	T
T	F	F
F	T	T
F	F	T

(c) Valid

Smoke	\sim Fire	Fire	Smoke \vee Fire \vee \sim Fire
T	F	T	T
T	T	F	T
F	F	T	T
F	T	F	T

(d) Neither

Smoke	Fire	(Smoke \Rightarrow Fire) \Rightarrow (\sim Smoke \Rightarrow \sim Fire)
T	T	T
T	F	T
F	T	F
F	F	T

(e) Neither

Smoke	Fire	heat	(Smoke \Rightarrow Fire) \Rightarrow ((Smoke \vee Heat) \Rightarrow Fire)
T	T	T	T
T	T	F	T
T	F	T	T
T	F	F	T
F	T	T	T
F	T	F	T
F	F	T	F
F	F	F	T

(f) Valid

Smoke	Fire	heat	$((\text{Smoke} \wedge \text{Heat}) \Rightarrow \text{Fire}) \Leftrightarrow ((\text{Smoke} \Rightarrow \text{Fire}) \vee (\text{Heat} \Rightarrow \text{Fire}))$
T	T	T	T
T	T	F	T
T	F	T	T
T	F	F	T
F	T	T	T
F	T	F	T
F	F	T	T
F	F	F	T

2.

(a).

$\{x/A, y/B, z/B\}$

(b).

No general unifier exists

(c).

$\{x/\text{John}, y/\text{John}\}$

(d).

No general unifier exists

3.

(a)

$\forall x (\text{Food}(x) \rightarrow \text{Likes}(\text{John}, x))$

Food(Apples)

Food(Chicken)

$\forall x \exists y (\text{Eats}(y, x) \wedge \sim \text{Kill}(x, y) \rightarrow \text{Food}(x))$

$\exists x \forall y (\text{Kill}(x, y) \rightarrow \sim \text{Alive}(y))$

Eats(Bill, Peanuts) \wedge Alive(Bill)

$\forall x (\text{Eats}(\text{Bill}, x) \rightarrow \text{Eats}(\text{Sue}, x))$

(b)

1. $\sim \text{Food}(x) \vee \text{Likes}(\text{John}, x)$

2. Food(Apples)

3. Food(Chicken)

4. $\sim \text{Eats}(g(x), x) \vee \text{Kill}(x, g(x)) \vee \text{Food}(x)$

5. $\sim \text{Kill}(g(y), y) \vee \sim \text{Alive}(y)$

6. Eats(Bill, Peanuts)

7. Alive(Bill)

8. $\sim \text{Eats}(\text{Bill}, x) \vee \text{Eats}(\text{Sue}, x)$

(c)

9. Kill(Peanuts, Bill) \vee Food(Peanuts)

10. $\sim \text{Kill}(\text{Peanuts}, \text{Bill})$

11. Food(Peanuts)

12. Likes(John, Peanuts)

Resolve 4 and 6, with unifier $\{x/\text{Peanuts}, y/\text{Bill}\}$

Resolve 5 and 7

Resolve 9 and 10

Resolve 1 and 11

(d)

13. Eats(Sue, Peanuts) Resolve 6 and 8 with unifier $\{x/\text{Peanuts}\}$
Therefore, Sue eats peanuts.

(e)

First order:

$\forall x \exists y (\sim \text{Eats}(y, x) \rightarrow \text{Die}(y))$
 $\forall y (\text{Die}(y) \rightarrow \sim \text{Alive}(y))$
 $\text{Alive}(\text{Bill})$

CNF:

14. $\text{Eats}(y, x) \vee \text{Die}(y)$
15. $\sim \text{Die}(y) \vee \sim \text{Alive}(y)$
16. $\text{Alive}(\text{Bill})$

Resolution:

17. $\sim \text{Die}(\text{Bill})$	Resolve 15 and 16 with unifier $\{y/\text{Bill}\}$
18. $\text{Eats}(\text{Bill}, x)$	Resolve 14 and 17
19. $\text{Eats}(\text{Sue}, x)$	Resolve 8 and 18

Since the unifier has no value for x , we cannot conclude anything on what Sue eats.

4.

(a). knowledge base:

1. mythical \Rightarrow immortal
2. $\neg \text{mythical} \Rightarrow \neg \text{immortal} \wedge \text{Mammal}$
3. $(\text{immortal} \vee \text{Mammal}) \Rightarrow \text{horned}$
4. $\text{horned} \Rightarrow \text{magical}$

(b).

1. $\neg \text{mythical} \vee \text{immortal}$
2. $\text{mythical} \vee (\neg \text{immortal} \wedge \text{Mammal}) = (\text{mythical} \vee \text{immortal}) \wedge (\text{mythical} \vee \text{Mammal})$
3. $\neg (\text{immortal} \vee \text{Mammal}) \vee \text{horned} = (\neg \text{immortal} \vee \text{horned}) \wedge (\neg \text{mammal} \vee \text{horned})$
4. $\neg \text{horned} \vee \text{magical}$

(c).

The knowledge base entails that the unicorn is magical, and the unicorn is horned. However, with the current knowledge base, it is not possible to prove that the unicorn is mythical.

5. $\text{Mythical} \vee \text{Mammal}$ from 2
6. $\neg \text{mammal} \vee \text{horned}$ from 3
7. $\text{mythical} \vee \text{horned}$ from 5,6
8. $\neg \text{immortal} \vee \text{horned}$ from 3
9. $\neg \text{mythical} \vee \text{horned}$ from 1,7
10. horned from 7,9

11. magical from 10,4

5.

(a).

when a is valid then a is true in all model, so $\text{True} \models a$

when $\text{True} \models a$, then by definition, for every model in True is true, a is true. True is always true so a is always true.

(b).

$\text{False} \models \alpha$ iff for all models in which False is true, α is true.

Since there are no models where False is true, for any α , $\text{False} \models \alpha$.

(c).

if $\alpha \models \beta$ then $\alpha \Rightarrow \beta$ is true when $\alpha = \text{True}$, and it is also true when $\alpha = \text{False}$ by definition of implication. In that case, if $\alpha \models \beta$ then $\alpha \Rightarrow \beta$ is valid.

If $\alpha \Rightarrow \beta$ is valid, then if α is true and β is true, and we have $\alpha \models \beta$, and if α is false, then $\alpha \models \beta$ because $\text{False} \models \beta$ for any β . Thus, if $\alpha \Rightarrow \beta$ is valid then $\alpha \models \beta$.

(d). from (c) we know $\alpha \models \beta$ iff $\alpha \Rightarrow \beta$ is valid,

By implication elimination, $\alpha \Rightarrow \beta$ is valid iff $\neg\alpha \vee \beta$ is valid. $(\neg\alpha \vee \beta) \equiv \neg(\alpha \wedge \neg\beta)$, so $\neg\alpha \vee \beta$ is valid iff $\alpha \wedge \neg\beta$ is false over all models, so $\alpha \wedge \neg\beta$ is unsatisfiable.
